
Hassan Rida

Applied AI Portfolio

Machine learning • NLP • Data science

A small portfolio showing the projects, tools, and skills I built during my Applied AI coursework.

GitHub Portfolio

<https://github.com/ridah757/Hassan-Rida-AI-Portfolio>

My Learning Journey

From basic concepts to real projects

Started with Python, notebooks, and data cleaning
Practiced machine learning and model evaluation
Built NLP projects using preprocessing and sentiment analysis
Used GitHub to organize work like a professional portfolio

Python

Colab

Pandas

GitHub

Featured Projects

NewsBot AI Project

Analyzed news content using NLP and sentiment analysis.

Wildfire Data Science

Used Kaggle workflow to predict wildfire impact and test models.

NLP Preprocessing Lab

Cleaned text with tokenization, stop words, and lemmatization.

Each project folder includes code and README documentation.

Skills and Tools

Programming

Python
Jupyter / Colab
GitHub

Data Science

Pandas / NumPy
Scikit-learn
Model evaluation

NLP

Text cleaning
Sentiment analysis
Preprocessing

Professional

Documentation
Organization
Clear results

My main growth was learning how to take messy data, build working code, and explain the results clearly.

Reflection and Next Steps

What I learned

AI projects need clean data before good results
Documentation matters because other people need to understand the work
GitHub can show growth, not just final answers

Next steps

Keep improving the portfolio
Add stronger projects and visuals
Use these skills for internships, jobs, and future classes
